U. S. DEPARTMENT OF AGRICULTURE Revised January 1943
Agricultural Research Administration
Bureau of Animal Industry

U. S. RECORD OF PERFORMANCE BREEDERS
PARTICIPATING IN
THE NATIONAL POULTRY IMPROVEMENT PLAN

The publication of this list is for the purpose of developing greater efficiency in the operation of the National Poultry Improvement Plan. Additional information regarding these breeders may be obtained by writing to them or to the official State agency in their respective States. This list is revised annually.

Foreword

The breeders listed in this publication are participating in the U. S. Record of Performance breeding stage of the National Poultry Improvement Plan, according to reports submitted by the State R.O.P. supervisors.

The estimated number of candidates for the 1942-43 trap-nest-record year are shown for each breeder in the first column following the name and address. The second column shows the estimated number of females in single-male U.S.R.O.P. matings during the spring of 1943. These data will give some idea as to the volume of U.S.R.O.P. products that can be produced on each of the farms. The data on number of flocks, number of candidates, and number of females in U.S.R.O.P. matings are summarized by breeds in the following table:

Breed	Number of flocks	Number of candidates (fall of 1942)	Estimated number of females in USROP matings (spring of 1943)
Single-Comb White Leghorns-----	180	79,459	26,217
New Hampshires-----	65	16,765	5,311
White Plymouth Rocks-----	58	19,153	5,233
Barred Plymouth Rocks-----	53	14,084	4,530
Single-Comb Rhode Island Reds--	53	19,268	5,683
White Wyandottes-----	10	2,223	726
Black Australorps-----	3	545	85
Buff Orpingtons-----	2	160	71
Buff Plymouth Rocks-----	2	226	34
Black Minorcas-----	1	75	0
Buff Minorcas-----	1	47	0
Lamonas-----	1	200	20
Light Brahmas-----	1	72	0
Rose-Comb Rhode Island Whites--	1	250	60
Single-Comb White Minorcas-----	1	250	126
Total-----	432	152,777	48,096

With a few exceptions the status of pullorum control for each flock is shown. When no class is shown it does not necessarily mean that the flock is not tested for pullorum disease, since some breeders do private testing and others have their flocks tested under State supervision but not under the supervision of the National Poultry Improvement Plan. The following code is used to indicate the pullorum classes:

PT - U. S. Pullorum-Tested.
 PCD - U. S. Pullorum-Controlled.
 PP - U. S. Pullorum-Passed.
 PC - U. S. Pullorum-Clean.
